

## ECOSOLV WATER ENHANCEMENT DEVICE

### Testimonial -

### Lemon Farm in Central Valley California

The Chad Anderson Farm, located in the Central Valley of California, raises lemons and has had the ecoSolv<sup>TM</sup> Water Enhancement installed since July 2016. In a conversation with Chad yesterday, he said he was so impressed by the growth acceleration of the new lemon trees he planted just a year ago. Chad said, "when he planted the new lemon saplings, they were just sticks about 12 inches high." Chad further stated, "the lemon trees are now just twelve months later at the stage of a three-year growth and producing lemons," noting "this is unheard of." The lemons shown in the photos below are ones from the lemon trees planted only a year ago.

Chad noted that his soil has a lot of clay in it requiring him to water the lemon trees for 25 hours at a time, twice a week. Since the installation of the ecoSolv Water Enhancement device, he now waters only 18 hours twice a week (a 28% reduction in water applied) and has been able to reduce application fertilizers by 50%. He commented that he no longer has a problem of standing water during irrigation, as the water perks more rapidly. Finally, Chad commented that the 2017 harvest of lemons was the largest he has ever had but did not give the exact percentage increase in the case of his older trees.

Lemon Farm – Central California

Based on conversation of Bob Davis with Chad Anderson – December 1, 2017.
